University of Vermont VCHIP to Collect Health Information

The Office of Vermont Health Access (OVHA) has contracted with the University of Vermont's (UVM) *Vermont Child Health Improvement Program (VCHIP)* to collect health information from primary care providers (PCP) through reviews of the medical records of Medicaid beneficiaries receiving services through OVHA's Vermont Chronic Care Initiative (VCCI). VCCI provides both case management and disease management services to Medicaid beneficiaries with one or more covered health conditions. The current chart audit will focus on patients with diabetes and/or hypertension. A random sample of charts has been identified.
